If you post a long article, you may not want all of this article appears on your page. Using Wordpress, creating "Read more" link is very easy. Just do the following steps:

1. After you log in your Wordpress, click "Posts", then "Add New".
2. On the Wordpress posting editor, you have "Visual" and "HTML" tabs. Select "HTML" and then click "menu" icon so you will get "<!--more-->" in your editor.
3. Text you typed before "<!--more-->" will appear on your page, whereas text which is after the "<!--more-->" can be read after "Read More" link clicked.
